

Ngo Van Xuan Duc

Backend Developer / DevOps

Da Nang, Vietnam · 0914214773 · ngovanxuanduc@gmail.com

SUMMARY

Backend Developer with 5+ years of experience building backend systems, distributed job-processing platforms, internal developer tooling, and production infrastructure. Focused on scalable architectures, database performance, developer productivity, and reliable production operations.

TECHNICAL EXPERTISE & CORE COMPETENCIES

Software Backend systems, distributed job processing, internal developer platforms, microservices, event-driven architecture, performance optimization

Infrastructure AWS, Docker, Kubernetes, Linux, CI/CD

Backend Node.js, NestJS, Python, FastAPI, Flask, Java, Spring Boot

Data & Messaging PostgreSQL, MongoDB, Elasticsearch, Redis, MinIO, BullMQ, Kafka, Celery

Observability OpenTelemetry, Prometheus, Grafana, distributed tracing

PROFESSIONAL EXPERIENCE

DIPRO TECH | Backend Developer / DevOps · Aug 2025 – Present

Develop backend services and internal systems using Python and Node.js, with responsibility across backend development, database design, deployment, and production operations.

- Built backend services for internal business systems using Python and Node.js.
- Designed database schemas and backend processing logic.
- Supported system integration, deployment, UAT, and production operations on AWS.

ATECH DIGITAL | Backend Developer / Team Lead · Jun 2024 – Jul 2025

Led backend development for high-throughput systems and distributed data-processing workloads using NestJS, PostgreSQL, Redis, BullMQ, Python, and Elasticsearch.

- Designed a distributed job-processing system using BullMQ and Redis, handling 10K–50K jobs/day across multiple workers.
- Designed PostgreSQL schemas and processing flows for concurrent job execution and worker scalability.
- Built distributed crawling and data-processing pipelines using NestJS, Puppeteer, PostgreSQL, and Elasticsearch.
- Optimised PostgreSQL queries, reducing execution time from 5–11 seconds to 200–300 milliseconds.
- Led system integration, production deployment, monitoring, and troubleshooting.

DEVTIFY TECHNOLOGIES | Backend Developer / DevOps · May 2022 – Jun 2024

Worked across backend development, internal developer tooling, Kubernetes infrastructure, and CI/CD automation.

- Built an internal NestJS code-generation platform that generated production-ready source bases and standardised CRUD modules from database schemas.
- Applied the platform to production projects, standardising backend structure and reducing repetitive development work.
- Automated Dev/UAT environment setup using AWS and GitLab CI/CD.
- Designed and maintained Kubernetes production environments and optimised Docker-based deployments.

FPT SOFTWARE | Web Developer · *Mar 2021 – May 2022*

Worked across Java/Spring Boot, Python backend, and Angular applications.

- Developed backend and frontend features for internal systems.
- Built Python services using Flask, Celery, and Paramiko for remote-server management.
- Performed testing, debugging, integration, and production support.

EDUCATION

Duy Tan University · *Software Engineer 2017 – 2021*

ACHIEVEMENTS

ACM/ICPC Asia Regional Participant — 2017–2019 Asia Ho Chi Minh · Asia Ha Noi · Asia Da Nang

AI-assisted Development — ChatGPT · Claude · GitHub Copilot · NotebookLM
